

MERCASOL

PROFESSIONAL CORROSION PROTECTION

MERCASOL IRELAND / PROFESSIONAL SYSTEMS

PROFESSIONAL VEHICLE CORROSION PROTECTION

**Built for Irish roads, coastal air
and year-round weather.**

A thorough workshop process for cavities, seams, wheel
arches and vehicle underbodies - using professional
Mercasol corrosion protection systems.

INSPECT / PREPARE / PROTECT

ENGLISH EDITION

PREPARATION IS THE FOUNDATION

Long-term protection begins before any coating is applied. Access, cleaning, inspection and complete drying are what allow the treatment to reach vulnerable metal and perform correctly.

01

ACCESS

Remove wheel-arch liners and any protective panels needed to reach rust-prone areas.

OPEN ACCESS TO VULNERABLE AREAS

02

CLEAN

Wash the chassis thoroughly, flush cavities and remove dirt, road salt, oil and loose contamination.

WASH AWAY DIRT, SALT AND OIL

03

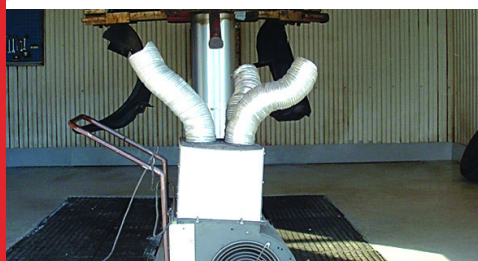

INSPECT

Assess existing corrosion and clean affected areas as required before treatment continues.

04

DRY

Continue only when the underbody and cavities are fully dry. Trapped moisture compromises protection.

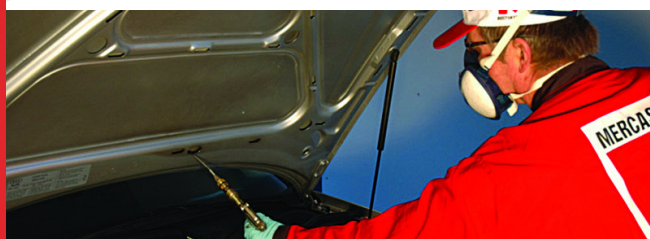

DRY THE VEHICLE COMPLETELY

05

FINAL PREP

Use compressed air to clear remaining dust and moisture, then mask sensitive components.

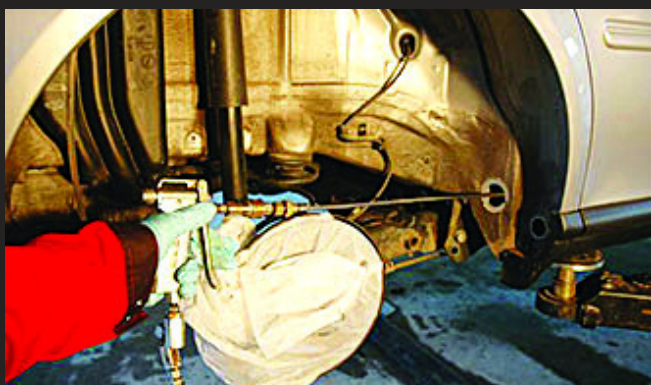

TREAT DETAIL AREAS AS SPECIFIED

CORRECT PREPARATION HELPS EVERY FOLLOWING LAYER PERFORM AS INTENDED.

PROTECTION FROM THE INSIDE OUT

A complete treatment combines penetrating cavity protection with a durable underbody barrier. Each product is selected for the surface, access point and expected exposure.

CAVITY PROTECTION

A penetrating corrosion protection fluid is sprayed into doors, sills, seams, flanges and enclosed chassis sections. It coats internal metal surfaces and helps displace moisture.

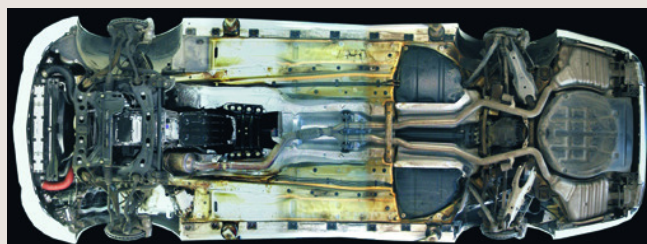

UNDERBODY PROTECTION

A wear-resistant coating is applied to the vehicle underside and wheel arches, creating a durable barrier against moisture, road contamination and stone impact.

VEHICLE-SPECIFIC COVERAGE

Professional applicators follow model-specific treatment diagrams and access points to reach internal panels, structural cavities and corrosion-prone joints.

ADDED BENEFIT: A QUIETER RIDE

Many corrosion protection coatings also provide useful sound-damping properties, reducing road and stone-impact noise transmitted through the vehicle floor and wheel arches.

PROTECTION FOR THE ROAD AHEAD

Professional application combines correct preparation, purpose-designed products and thorough coverage. The result is a protection system tailored to the condition and construction of your vehicle.

STRUCTURE

Helps slow corrosion on exposed metal, seams and internal cavities.

DURABILITY

Creates a resilient barrier against moisture, grime and stone impact.

COMFORT

Adds useful sound damping across the underbody and wheel arches.

CARE

Supports inspection-led treatment and sensible maintenance intervals.
